

# EVENT MANAGEMENT APP

## SRS DOCUMENT

### PROJECT DESCRIPTION

- Create angular project
- Create a temporary json file to store the data
- Create all necessary components such as navigation,home,employee,update-employee,view-employee,register,login
- Add all components and manage routing in routing module
- Create service for employee
- Login page is directed first and checks if email and password matches with the data in json.
- If validation success, go to dashboard
- when click CHANGE PASSWORD then
- Perform validation and update data in json
- Then display all the employee details and ADD EMPLOYEE button
- onclick, new employee can be registered
- Admin can view details of each employee and perform CRUD Operations
- Admin can search for any employee if needed
