

## OUTPUT

[Home](#) [Registration](#) [Pagination](#)

The 'nav' tag is used to define a block of links for navigation, for the current page, or for other pages.

### Navigated to home page

## Introduction to Bootstrap

Get started with [Bootstrap](#), the world's most popular framework for building responsive, mobile-first sites, with [Bootstrap CDN](#) and a [template starter page](#).

According to the official website, Bootstrap is the most popular HTML, CSS, and JS framework for developing responsive, mobile first projects on the web. Sounds great! Now how do I use it? It would be easy to send you over to their Getting Started page and call it a day. Their setup guide is indeed a host of useful information — links to CDNs, explanations on how to install with Bower, npm, and Composer, information on integration with Autoprefixer and LESS, a bunch of templates, licenses, and translations — but you could read [this blog](#) here instead for a better and easier understanding.
